

TRAINING COURSE

Risk Management and Management of Change Workshop

Introduction

This 2-day workshop focuses on Risk Management and Management of Change, two subjects that have been introduced with the EASA Regulations and are still fairly new in the aviation Industry. It is based on the SxP model and the bow-tie model which is recognised in the financial world, the oil and gas industry and also the aviation industry as Best Practice.

This course will explain how to successfully carry out risk assessments of identified hazards and avoid common mistakes. It will also show how to incorporate safety incidents in risk assessments and how to carry out risk assessments as part of the Management of Change procedures to ensure the successful implementation of change. After every theory session, there will be practical exercises, so newly acquired skills can be put to the test.

Objectives:

- Understand the added business value of making operational decisions on the basis of a risk assessment
- Appreciate the impact of successful risk management on the oversight cycle and understand the risk management requirements
- Understand the advantages and disadvantages of different models
- Understand how the management of change work
- Understand the ARMS methodology
- Be familiarized with the different kinds of software available to facilitate risk management

COURSE DURATION

2 days, starting at 9:00 on the first day and ending at 17:00 on the last day.

TARGET GROUP

Aviation industry at large: Aerodromes, Maintenance Organisations, Operators, Authorities
