

TRAINING COURSE

Aerodrome Certification & Oversight

Introduction

This course provides participants with the knowledge, skills, and attitudes to effectively navigate the certification and oversight processes for aerodromes.

Aerodromes are complex entities, and aerodrome operators must have a certificate. Certification is therefore a key task of any Competent Authority. Additionally, oversight is also another vital aspect.

This course explains the principles and procedures for certification and oversight of aerodromes, as viewed from both the Authority side and the Applicant's side.

As some of the same principles apply to change management, this issue will also be discussed in the course.

Finally, during the certification and oversight processes, one can come across the need to use one or more flexibility mechanisms, so this aspect will also be covered during the training.

The course also incorporates examples and practical hints to enhance learning.

COURSE DURATION

4, Four days | 09:00 till 17:00

TARGET GROUP

CAAs:

- Aerodrome inspectors
- Other personnel involved in certification processes (ATS inspectors, Legal advisors)

Aerodrome operators:

- Personnel engaged in certification or management of change processes.
