

TRAINING COURSE

Auditing in Aerodromes Environment

Introduction

The aim of the course is to equip trainees with the competencies to effectively perform the role of an aviation auditor in an Aerodrome Environment.

This course aims to offer practical training in compliance monitoring techniques. This training will provide participants with the knowledge, skills and attitudes to conduct efficient audits of various systems, procedures, processes and corresponding management structures in an Aerodrome Environment, thereby supporting business goals.

COURSE DURATION

3 Days: 09:00 - 17:00 hrs.

TARGET GROUP

This course will be of benefit to future auditors with an Aerodrome background and working area of expertise.

This course covers auditing techniques for those who are relatively new to auditing. If you're already an experienced auditor but new to the area of Aerodromes, a regulatory course on Part Aerodrome would be more appropriate. Or, take this course instead of a recurrent auditing techniques course.
