Training Organisation

TRAINING COURSE
Auditing in CAMO/Maintenance Environment

Introduction

The aim of the course is to equip trainees with the competencies to effectively perform the role of an aviation auditor in a CAMO/Maintenance Environment.

This course aims to offer practical training in compliance monitoring techniques. This training will provide participants with the knowledge, skills and attitudes to conduct efficient audits of various systems, procedures and processes involved in the environment of CAMO/Maintenance, as well as their corresponding management structures, thereby supporting business goals.

🕐 COURSE DURATION

3 Days: 09:00 - 17:00 hrs.

👤 TARGET GROUP

This course will be of most benefit to future auditors with a CAMO/Maintenance background and working area of expertise.

This course covers auditing techniques for those who are relatively new to auditing. If you're already an experienced auditor but new to the area of CAMO/maintenance, a regulatory course on Part Continuing Airworthiness would be more suited. Or, take this course instead of a recurrent auditing techniques course.
