JAA
Training Organisation

Auditing in Flight & Ground Operations Environment

Introduction

The aim of the course is to equip trainees with the competencies to effectively perform the role of an aviation auditor within the field of Flight and Ground Operations.

This course aims to offer practical training in compliance monitoring techniques. This training will provide participants with the knowledge, skills and attitudes to conduct efficient audits of various systems, procedures and processes involved in the field of Flight and Ground Operations, as well as their corresponding management structures, thereby supporting business goals.

🕐 COURSE DURATION

3 Days: 09:00 - 17:00 hrs.

👤 TARGET GROUP

This course will be of most benefit to Future auditors with a Part Air Operations background and working area of expertise (AOC, SPO etc.)

This course covers auditing techniques for those who are relatively new to auditing. If you're already an experienced auditor but new to the Air Operations area, a regulatory course in Part Air Operations would be more suited. Or, take this course instead of a recurrent auditing techniques course.
