

TRAINING COURSE

Risk-Based and Performance-Based Oversight

Introduction

This course aims to provide participants with a comprehensive, high-level understanding of Performance-Based Oversight (PBO) and Risk-Based Oversight (RBO), including their purpose, principles, and practical application within the aviation environment. It also seeks to support participants in identifying effective ways to introduce and integrate these concepts within existing compliance-based oversight systems.

Any civil aviation organisation that is required to have a management system would benefit from PBO. A compliance monitoring programme incorporating human factors and safety management is where industry has been for the past decade, PBO is the next step in the evolution of safety oversight.

This risk-based approach is a measurement of how well company processes are maturing as a result of continuous improvement and guides the accountable manager much better in how to allocate resources appropriately across the business compared to a purely compliance-based approach.
